Comments Of Jessi Hain

- I support the ending of all morse code tests as any requirement for any amateur radio license as proposed by the various RMs #10782 to 10787. I do, however, suggest that the FCC follow the specific proposals of the NCVEC (RM-10787) and No Code International (RM-10786) as they address all the specifics which need to be changed in Part 97 rules and regulations.
- Several years ago, the FCC asked for public comments on the retention of code testing. That review resulted in nothing to justify code testing, except the ITU treaty at that time. The treaty has been changed and even that one international regulatory/treaty requirement reason is now gone.
- I have read many of the comments from those that want to keep morse code testing and I offer this observation. In all of their comments to keep code testing, none of their arguments justify code testing as a requirement, but rather they argue for continuation of morse code as a mode of operation. The petitions to end code testing do NOT make any effort to end or eliminate USE of morse code anywhere. If there is no morse code test for any amateur license, amateurs will still be free to learn and use morse code if they so desire. Ending morse code testing as proposed by the various petitions will not end or ban code use on the air.
- Please eliminate totally Element 1 as soon as possible.

Respectfully submitted,

Jessi Hain
